

(Working Title) Appendix: Task Switching Replication
Cognitive Control under varying Posture

Abstract

Appendix of all figures, tables and materials generated by the project. Not all figures and tables may be used in final document, so can refer to this document for details of data analysis, visualizations, summary tables and other products of this project.

Appendix

Tables

Figures

Table 1: Summary of experiment participants results							
	cond	date		accuracy	std	rt	std
participant							
1000	1	2021-11-02	11:01:00	0.8255	0.3800	0.7640	0.2459

Table 2: Means and standard deviations of reaction times (in ms) as a function of posture and condition

			rt	std
posture	congruantTrialType	switchTrialType		
sitting	congruant	noswitch	0.6630	0.2089
		switch	0.8632	0.2488
	incongruant	noswitch	0.7746	0.2629
		switch	0.8841	0.2450
standing	congruant	noswitch	0.6077	0.1935
		switch	0.7754	0.2246
	incongruant	noswitch	0.7088	0.2055
		switch	0.8286	0.2408

Figure 1: Accuracy from Experiment (replication of task switching). The results show proportion of correct responses (or accuracy) broken down by experiment conditions (congruent vs. incongruent trials, switch vs. no switch trials, in the standing or sitting posture). Error bars represent 95% confidence interval.

Figure 2: Reaction time from Experiment (replication of task switching). The results show average reaction times broken down by experiment conditions (congruent vs. incongruent, switch vs. no switch trials, in the standing or sitting posture). Error bars represent 95% confidence interval.
