November 17, 2021

Abstract

Appendix of all figures, tables and materials generated by the project. Not all figures and tables may be used in final document, so can refer to this document for details of data analysis, visualizations, summary tables and other products of this project.

Appendix

Table 2: Means and standard deviations of accuracy and reaction times (in sec) as a function of posture and experiment trial types.

			accuracy	std	rt	std
posture	congruentTrialType	switchTrialType				
sitting	congruent	noswitch	0.9269	0.2605	0.5490	0.2106
		switch	0.8105	0.3921	0.6571	0.2597
	incongruent	noswitch	0.8995	0.3008	0.5861	0.2371
		switch	0.8857	0.3184	0.6370	0.2470
standing	congruent	noswitch	0.8889	0.3144	0.5715	0.2356
		switch	0.8197	0.3846	0.6504	0.2642
	incongruent	noswitch	0.8743	0.3317	0.5726	0.2320
		switch	0.8687	0.3379	0.6280	0.2529

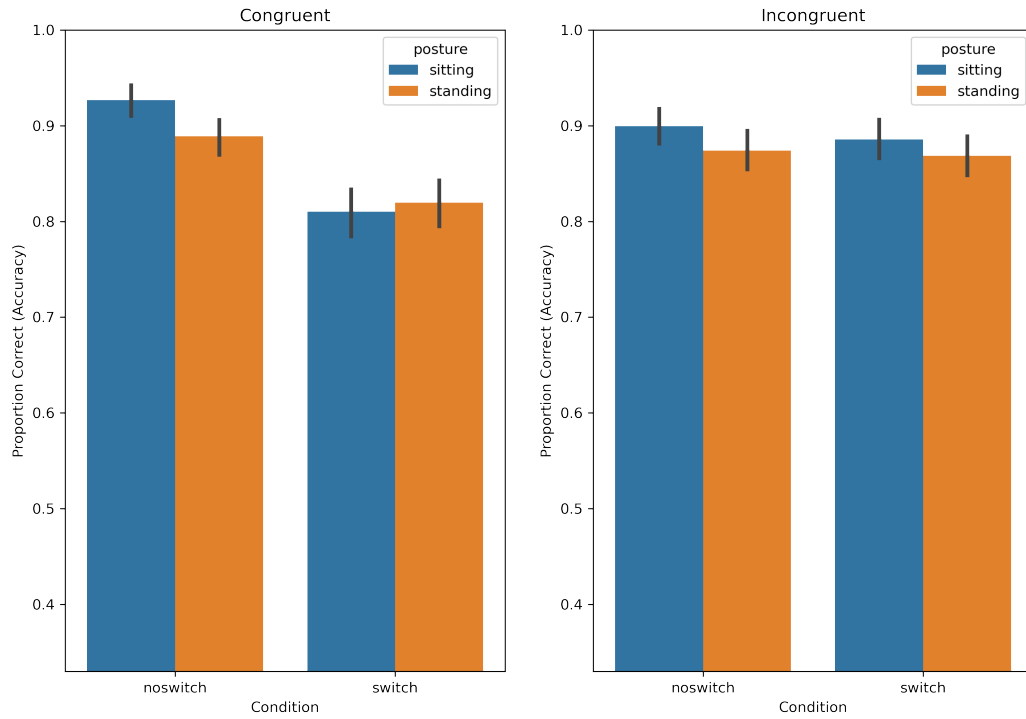

Figure 1: Accuracy from Experiment (replication of task switching). The results show proportion of correct responses (or accuracy) broken down by experiment conditions (congruent vs. incongruent trials, switch vs. no switch trials, in the standing or sitting posture). Error bars represent 95% confidence interval.

Figure 2: Reaction time from Experiment (replication of task switching). The results show average reaction times broken down by experiment conditions (congruent vs. incongruent, switch vs. no switch trials, in the standing or sitting posture). Error bars represent 95% confidence interval.
